Reply Facsimile Transmission received on October 9, 2006 from the United States Patent and Trademark Office confirming receipt of the entire response which consisted of 15 pages (transmittal-2 pages; amendment and reply-9 pages; 1.132 declaration by Peter Hwang-2 pages; and 1.132 declaration by Howard Wong-2 pages). As a result, it appears that the USPTO received the entire response, but lost or misplaced the declaration of Peter Hwang. Accordingly, the rejection of claims 11-15 in view of US Patent Publication 20050094227 per of the Final Office Action should be withdrawn.

Claims 1-5 and 7-15 are now pending in this application.

Applicants believe that the present application is now in condition for allowance. Favorable reconsideration of the application as amended is respectfully requested.

The Examiner is invited to contact the undersigned by telephone if it is felt that a telephone interview would advance the prosecution of the present application.

The Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 08-2025. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Commissioner is authorized to charge the unpaid amount to Deposit Account No. 08-2025. If any extensions of time are needed for timely acceptance of papers submitted herewith, Applicant hereby petitions for such extension under 37 C.F.R. §1.136 and authorizes payment of any such extensions fees to Deposit Account No. 08-2025.

AMENDMENT AND REPLY UNDER 37 CFR 1.116

Ŀ

Mail Stop AF Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

This Reply is in response to the Final Office Action mailed on August 10, 2006. Please amend the above-identified application as follows.

Amendments to the Specification begin on page 2 of this document.

Amendments to the Claims are reflected in the listing of claims which begins on page 4 of this document.

Remarks/Arguments begin on page 7 of this document.

Please amend the application as follows:

Amendments to the Specification:

Please amend the specification as follows:

Please replace the paragraph starting at page 7, line 6 with the following rewritten paragraph:

Printer 10 includes apparatus for correctly positioning and aligning media on input tray 12 so that media, regardless of size, is fed into the printer in the correct position and orientation. The printer control system (not shown) is designed such that the printer may accommodate different sizes of media. However, the control system assumes that all media, regardless of size, will be oriented on input tray 12 with an edge of the media abutting a media edge alignment guide 38, which is visible in Fig. 7 8. Alignment guide 38 is fixed relative to printer 10 near the right edge of input tray 12 and establishes a datum point that the printer controller uses during printer operation. Turning to Fig. 3, a media width adjustment guide 40 is provided near the left edge of input tray 12 and is adjustably slidable along the X axis. As noted, printer 10 is designed to accept cut sheet media of different sizes. In some embodiments, media of different sizes may be placed on input tray 12 such that one edge of the media is aligned with and abuts media edge alignment guide 38. With media placed in this position, width adjustment guide 40 is slid into position such that it abuts the opposite edge of the media. An adjustably slidable media length adjustment guide 42 is also provided on input tray 12 (Fig. 3) and is slidably adjustable along the Y X axis. An opening 48 is formed in output tray 14 to receive length adjustment guide 42 when the trays 12 and 14 are nested in the storage position, as shown in Fig. 8. In addition to being able to accommodate media of different length using length adjustment guide 42, the length of input tray 12 is also adjustable along the X axis.

Please replace the paragraph starting at page 7, line 28 with the following rewritten paragraph:

Turning to Fig. 6, input tray 12 is built with an upper portion 44 that is slidably assembled with a lower portion 46. Bosses 32 are formed as part of lower portion

46 of tray 12, and therefore it is lower portion 46 that is connected to cheeks 26 and 28. Upper portion 44 is attached to lower portion 46 to allow the upper portion to be slid relative to the lower portion along the Y x axis. In Fig. 3, input tray 12 is shown with upper portion 44 slid inwardly toward printer 10 so that the tray has the shortest length. In Fig. 6, input tray 12 is shown with the upper portion 44 slid outwardly away from printer 10 to an extended position so that the tray has the maximum length. An internal stop (not shown) prevents upper portion 44 from being slid off lower portion 46.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

(Previously presented) A hardcopy device for processing media,
 comprising:

an input tray configured to pivot about a first axis between a first position and a second position and including a movable media guide;

an output tray configured to pivot about a second axis between a first position and a second position, the output tray including an opening configured to receive the guide when the input tray and the output tray are in the second positions;

wherein the input tray and the output tray are parallel in the first and second positions.

- 2. (Previously presented) The hardcopy device according to claim 1 wherein the first pivot axis and the second pivot axis are parallel but offset relative to one another.
- 3. (Previously presented) The hardcopy device according to claim 2 having a media travel axis that is transverse to the first axis and the second axis and the first axis and the second axis are offset relative to one another along the media travel axis.
- 4. (Previously presented) The hardcopy device according to claim 2 wherein a terminal end of the input tray extends on a first side of a vertical plane containing the first axis in the first position and on a second side of the vertical plane in the second position such that the input and output trays are maintained in the second positions without independent securement.
- 5. (Previously presented) The hardcopy device according to claim 1 wherein the input tray and the output tray are operably coupled to one another

during movement of the input tray from the first position to the second position which causes movement of the output tray from the first position to the second position.

- 6. (Cancelled)
- 7. (Previously presented) The hardcopy device according to claim 1 wherein the output tray is configured to pivot between the first position and the second position while the input tray is in the first position.
- 8. (Previously presented) The hardcopy device according to claim 1 including a trap door pivotally connected to the output tray such that when the output tray is in the second position the trap door lies in a plane that is not parallel to a plane of the output tray.
- 9 (Previously presented) The hardcopy device according to claim 8
